

How the platform works

- 1 To get started, select your main interest: from **Geography** or a **Service**.
- 2 Select your content type from **Daily Views & Strategic Content**, **Reports** or **Data & Forecasting**.
- 3 You can drill down further into content types by using the sub tabs (e.g. **Analysis**, **Strategic Content**).
- 4 Select your filters. You can select multiple filters, which can be cleared at any time.
- 5 Quickly download the article/report to PDF. Hovering over the article/report allows you to save, print, email the analyst and preview the article/report.
- 6 You can save your main navigation and filter selections – your five latest saved views can be directly accessed using the arrow key, and are also available within the saved content section of **My BMI**.
- 7 **Related Content Area**: content relevant to your selection can be found here.

Inside an Article/Report:

Icons

✉ Email the analyst, 💾 save the article/report, 📄 download article to PDF, 📄 download the full report (strategic content only) and 🖨️ print the article/report.

Related Analysis/Analysts' Choice

Content relevant to your selection can be found here.

Explore Data

Where possible, the data used to create the charts and tables contained within our articles and reports can be explored in Data Tool and downloaded to Excel.

Data & Forecasting

- 1 Data Tool** – Create, manipulate, annotate, download and save your charts and tables within **My BMI**. You can access the **Data Tool** by clicking via the chart on the **Data & Forecasting** page, or via the **Data Tool** sub tab.
- 2 Indices** – Browse our **Risk Indices** across regions and curated peer groups, or define your own. Compare risk summaries with data (Country Risk only), download the data or save to **My BMI** for future use. Indices can be accessed by clicking via the chart on the **Data & Forecasting** page, or via the **Indices** sub tab.
- 3 BMI Databases** – Our proprietary databases allow you to filter, download, save, annotate and, in certain databases, create charts and customised tables. A comprehensive list of all of BMI Databases is displayed in the third column within the **Data & Forecasting** page, or via the **BMI Databases** sub tab.

The screenshot shows the BMI Research website's 'Data & Forecasting' page. At the top, there's a navigation bar with 'Select: Geography or Service' and a search bar. Below that, there are tabs for 'Daily Views & Strategic Content' and 'Reports'. The main content area is divided into three columns. The first column, labeled 'Data Tool' (1), contains a bar chart titled 'Subdued Price Trajectory' showing commodity price changes from 2012 to 2018f. The second column, labeled 'Indices' (2), lists various risk categories like Country Risk, Operational Risk, and Project Risk Index. The third column, labeled 'BMI Databases' (3), lists several databases such as Disease Database, Global Refineries, and Power Key Projects.

Inside the Data Tool:

Create your own charts/add content to BMI charts

Quickly select your geographies, indicators and available date ranges of interest. Display the data, or select **Raw Data XLS** to download your selection to excel.

Format & Layout

Allows you to create/edit customised charts, or view/edit charts created in house. Customisation options include: chart types, line types, adding an additional Y-axis, legend and title options, drag and drop indicator re-ordering.

Annotate

Annotate your chart with either lines or text notes, where you can also annotate your table – just double click any cell in the table. Double-clicking an annotation allows you to edit it.

Save

Save your charts and tables to access at a later date and to benefit from data updates.

Export

Export your customised chart as an image or your customised table to Excel.
